AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

(Currently Amended) A memory device, comprising: 1 1. 2 an array of [[a]] magnetic storage cells, each cell comprising a first magnetic layer, a second magnetic layer, and a dielectric in between each said first 3 and second magnetic layers; 4 a first set of conductors to receive current for writing data to said magnetic 5 storage cells; and 6 a second set of conductors to provide a voltage across the second set of 7 conductors to cause current flow through at least one of the magnetic 8 storage cells for heating said at least one magnetic storage cell when 9 writing a bit of data to said at least one magnetic storage cell. 10 (Original) The memory device of claim 1, wherein the first set of conductors is 1 2. 2 electrically isolated from the second set of conductors within the array of 3 magnetic storage cells. (Currently Amended) The memory device of claim 1, wherein heating said at 1 3. least one magnetic storage cell reduces the magnetic coercivity of at least 2 3 one of the first and second magnetic layers comprising of the magnetic storage cell. 4 (Original) The memory device of claim 1, wherein the array of magnetic storage 1 4. cells comprise spin tunneling storage cells. 2 (Original) The memory device of claim 1, wherein the array of magnetic storage 1 5. cells comprise giant magnetoresistive storage cells. 2 (Original) The memory device of claim 1, wherein said array of magnetic storage 1 6. cells comprise anisotropic magnetoresistive material. 2

1 8. (Original) The memory device of claim 1 wherein said magnetic storage cells serve as electrical heating elements. 1 9. (Cancelled) 1 10. (Original) The memory device of claim 1, wherein said second conductor set includes a heater element placed in series with at least one of the conductors of the second conductor set. 1 11. (Original) The memory device of claim 10, wherein said heater element is a resistive device. 1 12. (Currently Amended) The memory device of claim 1, A memory device, comprising: 2 an array of magnetic storage cells, each cell comprising a first magnetic layer, a second magnetic layer, and a dielectric in between each said first and second magnetic layers; 3 a first set of conductors to receive current for writing data to said magnetic storage cells; 4 a second set of conductors for heating at least one magnetic storage cell when writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage eells cell. 1 13. – 18. (Cancelled)	2	7.	cells comprise any magnetoresistive storage material.
1 10. (Original) The memory device of claim 1, wherein said second conductor set includes a heater element placed in series with at least one of the conductors of the second conductor set. 1 11. (Original) The memory device of claim 10, wherein said heater element is a resistive device. 1 12. (Currently Amended) The memory device of claim 1, A memory device, comprising: 2 an array of magnetic storage cells, each cell comprising a first magnetic layer, a second magnetic layer, and a dielectric in between each said first and second magnetic layers; 3 a first set of conductors to receive current for writing data to said magnetic storage cells; 4 a second set of conductors for heating at least one magnetic storage cell when writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage eells cell.	1	8.	(Original) The memory device of claim 1 wherein said magnetic storage cells
10. (Original) The memory device of claim 1, wherein said second conductor set includes a heater element placed in series with at least one of the conductors of the second conductor set. 11. (Original) The memory device of claim 10, wherein said heater element is a resistive device. 12. (Currently Amended) The memory device of claim 1, A memory device, comprising: an array of magnetic storage cells, each cell comprising a first magnetic layer, a second magnetic layer, and a dielectric in between each said first and second magnetic layers; a first set of conductors to receive current for writing data to said magnetic storage cells; a second set of conductors for heating at least one magnetic storage cell when writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage eells cell.	2		serve as electrical heating elements.
includes a heater element placed in series with at least one of the conductors of the second conductor set. 1	1	9.	(Cancelled)
conductors of the second conductor set. 1	1	10.	(Original) The memory device of claim 1, wherein said second conductor set
1 11. (Original) The memory device of claim 10, wherein said heater element is a resistive device. 1 12. (Currently Amended) The memory device of claim 1, A memory device, comprising: 2 an array of magnetic storage cells, each cell comprising a first magnetic layer, a second magnetic layer, and a dielectric in between each said first and second magnetic layers; 3 a first set of conductors to receive current for writing data to said magnetic storage cells; 4 a second set of conductors for heating at least one magnetic storage cell when writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage eells cell.	2		includes a heater element placed in series with at least one of the
1 12. (Currently Amended) The memory device of claim 1, A memory device, 2 comprising: 3 an array of magnetic storage cells, each cell comprising a first magnetic layer, a 4 second magnetic layer, and a dielectric in between each said first and 5 second magnetic layers; 6 a first set of conductors to receive current for writing data to said magnetic 7 storage cells; 8 a second set of conductors for heating at least one magnetic storage cell when 9 writing a bit of data to said at least one magnetic storage cell; and 10 wherein said magnetic memory device includes a heater element placed in series 11 with the at least one of the said magnetic storage cells cell.	3		conductors of the second conductor set.
1 12. (Currently Amended) The memory device of claim 1, A memory device, 2 comprising: 3 an array of magnetic storage cells, each cell comprising a first magnetic layer, a 4 second magnetic layer, and a dielectric in between each said first and 5 second magnetic layers; 6 a first set of conductors to receive current for writing data to said magnetic 7 storage cells; 8 a second set of conductors for heating at least one magnetic storage cell when 9 writing a bit of data to said at least one magnetic storage cell; and 10 wherein said magnetic memory device includes a heater element placed in series 11 with the at least one of the said magnetic storage eells cell.	1	11.	(Original) The memory device of claim 10, wherein said heater element is a
2 comprising: 3 an array of magnetic storage cells, each cell comprising a first magnetic layer, a 4 second magnetic layer, and a dielectric in between each said first and 5 second magnetic layers; 6 a first set of conductors to receive current for writing data to said magnetic 7 storage cells; 8 a second set of conductors for heating at least one magnetic storage cell when 9 writing a bit of data to said at least one magnetic storage cell; and 10 wherein said magnetic memory device includes a heater element placed in series 11 with the at least one of the said magnetic storage cells cell.	2		resistive device.
an array of magnetic storage cells, each cell comprising a first magnetic layer, a second magnetic layer, and a dielectric in between each said first and second magnetic layers; a first set of conductors to receive current for writing data to said magnetic storage cells; a second set of conductors for heating at least one magnetic storage cell when writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage cells cell.	1	12.	(Currently Amended) The memory device of claim 1, A memory device,
second magnetic layer, and a dielectric in between each said first and second magnetic layers; a first set of conductors to receive current for writing data to said magnetic storage cells; a second set of conductors for heating at least one magnetic storage cell when writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage cells.	2		comprising:
 second magnetic layers; a first set of conductors to receive current for writing data to said magnetic storage cells; a second set of conductors for heating at least one magnetic storage cell when writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage eells cell. 	3		an array of magnetic storage cells, each cell comprising a first magnetic layer, a
a first set of conductors to receive current for writing data to said magnetic storage cells; a second set of conductors for heating at least one magnetic storage cell when writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage cells cell.	4		second magnetic layer, and a dielectric in between each said first and
 storage cells; a second set of conductors for heating at least one magnetic storage cell when writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage cells cell. 	5		second magnetic layers;
a second set of conductors for heating at least one magnetic storage cell when writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage cells.	6		a first set of conductors to receive current for writing data to said magnetic
writing a bit of data to said at least one magnetic storage cell; and wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage cells cell.	7		storage cells;
wherein said magnetic memory device includes a heater element placed in series with the at least one of the said magnetic storage eells cell.	8		a second set of conductors for heating at least one magnetic storage cell when
with the at least one of the said magnetic storage cells cell.	9		writing a bit of data to said at least one magnetic storage cell; and
	10		wherein said magnetic memory device includes a heater element placed in series
1 13. – 18. (Cancelled)	11		with the at least one of the said magnetic storage cells cell.
	1	13. –	18. (Cancelled)

1	19.	(Currently Amended) An electronic device comprising:
2		a processor;
3		an input device coupled to said processor;
4		an output device coupled to said processor;
5		and a memory device coupled to said processor, wherein said memory device
6		comprises[[;]]:
7		an array of a magnetic storage cells, each region magnetic storage cell
8		comprising a first magnetic layer, a second magnetic layer, and a
9		dielectric in between each said first and second magnetic layers;
10		a first set of conductors to receive current for writing data to said magnetic
11		storage cells; and
12		a second set of conductors for applying a voltage across said at least one
13		magnetic storage cell for heating said at least one magnetic storage
14		cell prior to writing a bit of data to said at least one magnetic
15		storage cell.
Į.	20.	(Original) The electronic device of claim 19, wherein the array of magnetic
2		storage cells comprise random access memory.
1	21.	(Original) The electronic device of claim 19, wherein said first magnetic layer
2		has a fixed orientation of magnetization and the second layer has a non-
3		fixed orientation.
1	22.	(Original) The electronic device of claim 19, wherein at least one of said second
2		set of conductors includes a resistive heating element for heating each
3		magnetic storage cell when current flows through said heating element.

1	23.	(Currently Amended) A magnetic storage cell comprising;:
2		a first magnetic layer, a second magnetic layer, and a dielectric in between said
3		first and second magnetic layers;
4		a first set of conductors positioned above and below said first and second
5		magnetic layers for writing to said magnetic storage cell; and
6		a second set of conductors positioned above and below said first and second
7		magnetic layers for applying a voltage across [[a]] said magnetic storage
8		cell for heating said selected magnetic storage cell prior to writing a bit of
9		data to said magnetic storage cell and for reading the data bit that is stored
10		on said magnetic storage cell.
1	24.	(Original) The magnetic storage cell of claim 23, wherein said magnetic storage
2		cell is a spin tunneling storage cell.
1	25.	(New) The memory device of claim 1, wherein the first set of conductors is
2		separate from the second set of conductors.
1	26.	(New) The memory device of claim 1, wherein the first and second magnetic
2		layers and the dielectric of the at least one magnetic storage cell and the
3		first and second set of conductors are arranged in a stack,
4		wherein the second set of conductors is located between the first set of conductors
5		in the stack.
1	27.	(New) The memory device of claim 26, the second set of conductors to further
2		provide a read voltage across the second set of conductors to read the at
3		least one magnetic storage cell during a read operation.
1	28.	(New) The memory device of claim 1, the second set of conductors to further
2		provide a read voltage across the second set of conductors to read the at
3	•	least one magnetic storage cell during a read operation.

1	29.	(New) The electronic device of claim 19, wherein the first set of conductors is
2		separate from the second set of conductors.
1	30.	(New) The electronic device of claim 19, wherein the first and second magnetic
2		layers and the dielectric of the at least one magnetic storage cell and the
3		first and second set of conductors are arranged in a stack,
4		wherein the second set of conductors is located between the first set of conductors
5		in the stack.
1	31.	(New) The electronic device of claim 30, the second set of conductors to further
2		provide a read voltage across the second set of conductors to read the at
3		least one magnetic storage cell during a read operation.
1	32.	(New) The electronic device of claim 19, the second set of conductors to further
2		provide a read voltage across the second set of conductors to read the at
3		least one magnetic storage cell during a read operation.
1	33.	(New) The magnetic storage cell of claim 23, wherein the first and second
2		magnetic layers, dielectric, first set of conductors, and second set of
3		conductors are arranged in a stack, and
4		wherein the second set of conductors is located between the first set of conductors
5		in the stack.
